

Abstract of the Disclosure:

A wood-encased pencil for writing, sketching, drawing, and cosmetic purposes includes grip surfaces or grip nubs projecting from at least one surface thereof as handling raised structures. The structures are of a plastic material and are applied in the form of an initially flowable preparation which includes at least one plastic and that later solidifies to give the raised structures. In a first variant, the preparation is anhydrous and is of a radiation-curable plastic. In a second variant, the preparation is, likewise, anhydrous, but its solidification is based on physical drying. For such a purpose, the preparation is of an organic solvent as well as a plastic.
